To Whom It May Concern:

I am happy to recommend Mr. Kevin Doshi for his pursuit of further studies at your esteemed university. I have mentored Kevin for the past two years, during which he served as a Teaching Assistant under my supervision for the subject of Distributed Computing in practical labs. During his own studies in the 5th semester, Kevin not only excelled as a student but also achieved an A+ in the subject, which further highlights his expertise and deep understanding of the material.

Throughout his tenure, Kevin exhibited exceptional teaching skills and a profound understanding of Distributed Computing. His expertise was particularly evident in key areas such as Message Passing systems, Clock Synchronization algorithms, and Data Consistency and Replication. Kevin's responsibilities encompassed guiding students through complex experiments, explaining intricate concepts, and grading their work fairly. His deep understanding of the subject matter allowed him to convey even the most complicated topics in a manner that was easy to understand. For example, when teaching Clock Synchronization algorithms, a topic considered abstract and challenging, Kevin employed a methodical approach. He began by drawing analogies to everyday scenarios, such as coordinating schedules across different time zones, which helped students grasp why such algorithms were needed in the first place. He then introduced Lamport's Logical Clocks through visual demonstrations, illustrating how distributed events can be ordered without synchronized physical clocks. This approach not only made the material more accessible but also significantly improved students' comprehension and confidence in the subject.

Kevin's conscientiousness was exemplary. He consistently went beyond the standard expectations of a Teaching Assistant. Recognizing that many students faced difficulties with Remote Procedure Calls (RPC), Kevin took the initiative to organize additional review sessions outside regular class hours. In these sessions, he provided thorough explanations, hands-on examples, and tailored support to address individual challenges. His commitment extended to creating detailed supplementary materials that clarified complex topics and ensured every student had the necessary resources for success. These efforts reflected his unwavering dedication to enhancing the educational experience and supporting his peers.

Not only was Kevin adept at tailoring the teaching on an individual level, but he also excelled when teaching groups. This can be attributed to his outstanding communication and public speaking skills. Kevin effectively conveyed complex topics multiple times to large groups of students with clarity and confidence, capturing and holding their attention. His ability to engage students and make intricate subject matter understandable speaks volumes about his communication skill. Additionally, Kevin's proactive approach was evident in his development of supplementary learning materials and his personal mentorship for students struggling with key concepts. His willingness to seek and act on feedback to continually improve lab sessions demonstrated a strong commitment to educational excellence.

Considering Kevin's outstanding performance and contribution, I strongly recommend him to the graduate program at your university without reservation. I am certain he will continue to excel and make a positive impact on others' on your campus.

Dr. Sudhir Dhage
Professor (Dean of academics)
Department of Computer engineering
Bhartiya Vidya Bhavans Sardar Patel Institute of Technology
